Sociable Labs

Principle Engineer

4/2010 – present

With SL's "Intelligent Social Plugins", visitors are 15 times more likely to share content and sites realize a ~1% sales increase. Responsibilities include:

- Design and maintenance of the frontend framework that manages feature placement, library and module initialization, and cross-domain and inter-module communications.
- Feature development including the Product Share module, and assistance with several other modules.
- Deployment assistance on a number of well-known websites including ticketmaster.com, livenation.com, active.com, and tinyprints.com

nFriedly Web Development

Owner

6/2004 – 4/2010

Worked on wide range of projects from AJAX-driven web apps to server performance engineering for clients including:

- **Atari** – Several different projects related to Atari's Back Yard Sports line of games including a series of online mini-games and parental consent controls using ActionScript and Drupal.
- **Sunny Delight** – Helped build forms, website, and database for the Sunny D Book Spree promotion.
- **Elations** – Implemented geolocation system to show nearest retail store.
- **Standard Publishing** – Converted their flash-based home page graphic to a jQuery/CSS one that was faster, more compatible, and easier to maintain.
- **Veryfine Juice** – Coded website and product database including CSS-driven nutrition facts.

iBoomerang.com, Inc.

Lead Developer

2/2005 – 8/2008

- Built an AJAX-driven email template tool for agent-client communication.
- Led development on the Agency BackOffice system that handles sales reporting and sales-driven contests.
- Helped build the Agency-In-A-Box: A scalable system for binding insurance agency websites with centralized reporting and per-agent sub-sites.
